“We would like to recommend Malcolm from Synergy Electrical”

He worked really hard to install all the lighting, power supply and underground cabling for our new Summer House. The job was completed in the agreed time and he even managed to save us quite a bit by recommending a new lighting system that was not only cheaper but also far better quality than the one we had in mind.

- Peter, Lewes

“...the service we received was nothing short of exceptional.”

Malcolm and his team were on-site for several months and during that time the service we received was nothing short of exceptional. They were professional, courteous and completely different to most of the tradesman we had in for other work. I cannot rate them highly enough and have used them for numerous jobs since.

- Warren Francis

“Highly professional and easy to get on with.”

I am very happy to recommend Synergy Electrical. They handled all the second fix requirements for our new development and despite numerous obstacles being placed in their way they never grumbled, stuck to the agreed price

- Paul, Brighton

Rewires

Upgrade your home's electrical backbone

Outdated or damaged wiring struggles to keep up with modern appliances, and they can pose serious safety risks. Whether it's a full rewire during renovation or a partial rewire to update specific circuits, we'll make sure your home's wiring is safe, efficient and installed to last.

Our rewire services:

- Full rewires for complete replacement of wiring, sockets, switches and consumer unit
- Partial rewires for targeted updates without disrupting your whole system
- Future-proofing – capacity for EV chargers, home offices and smart systems
- Certified to the latest UK safety standards

Signs you may need a rewire:

- Frequent tripped circuits or blown fuses
- Flickering lights or warm sockets
- Wiring over 25 to 30 years old

Why choose us for rewires

- Qualified NICEIC electricians
- Minimal disruption
- Guaranteed compliance

Let us help you bring your home's electrics up to today's standards.
Chat to us about your rewiring.

New Fuseboard / Consumer Unit

Upgrade for a safe, reliable and modern home

Your fuseboard (consumer unit) is the central hub of your home's electrical system. It's vital that it runs effectively, but outdated or overloaded units can compromise safety and leave you without the protection modern RCDs and MCBs provide. We install the latest, regulation-compliant consumer units, making electrics safe and efficient.

When to upgrade

- Fuseboard over 20 years old
- No RCD protection or visible outdated fuses
- Frequent tripped circuits or electrical faults
- Adding major new appliances or a home extension

Our consumer unit service includes

Safe removal of your old fuseboard, installation of a modern, fully compliant unit with RCD and circuit breaker protection, complete system testing, and certification to UK standards. We'll label all circuits to make identification and future maintenance quick and simple.

Why choose us for fuseboards

- NICEIC-approved electricians
- Work certified to BS 7671 wiring regulations
- Minimal disruption during installation
- Clear, honest advice on your home's electrical needs

House extensions

Power your new space properly from day one

House extensions add valuable living space, but they also place new demands on your electrical system. From lighting and sockets to appliances and smart tech, getting the electrics right is essential for safety and performance. A trusted, specialist electrician ensures everything is properly designed, installed and certified from the outset.

Our house extension electrical services:

- Complete electrical design and installation for new extensions
- Power, lighting and data cabling tailored to your new space
- Integration with your existing electrical system
- Capacity planning for kitchens, home offices and modern appliances
- Fully tested and certified to current UK regulations

Why working with a specialist electrician matters:

- Extensions often require load calculations and consumer unit upgrades
- Poor electrical planning can lead to overloads and future faults
- Compliance with Building Regulations is essential

Why choose us for extension electrics:

- Experienced, NICEIC-qualified electricians
- Seamless coordination with builders and contractors
- Safe, compliant and future-ready installations

Let us help you achieve your house extension project with confidence. Speak to us about powering your new space the right way.

Outside office

Bring power and comfort to your outdoor workspace

Outdoor offices, studios or garden rooms are increasingly popular. To achieve your outside space goal, careful electrical planning is vital. Working with specialist electricians, we can ensure your space is safe, functional and compliant when it comes to your electrics.

Our outside office electrical services:

- Full electrical design and installation for garden offices and studios
- Electrics planned and tailored to your space
- Integration with your main home electrical system
- Fully tested and certified to current UK regulations

Safe and smart electrics for outdoor spaces

Outdoor spaces often need dedicated circuits or waterproof fittings, and poor planning can lead to overloads, faults or unsafe installations. Working with electrical specialists you can achieve your project goals.

Why choose us for your outdoor space electrics:

Outdoor spaces often need dedicated circuits or waterproof fittings, and poor planning can lead to overloads, faults or unsafe installations. Working with electrical specialists you can achieve your project goals.

Ensure your outdoor office or space is powered safely and efficiently. Talk to us about how your outdoor office or studio space.

Home renovations & workspaces

Get power, connectivity, and comfort wherever you need it

Whether it's a home office, a gym in the garage, a workshop, or any other renovation, you need an electrical setup that's reliable, safe, and tailored to your space. We design and install wiring to ensure you have the right power, lighting, and connectivity exactly where you need it (without compromising safety or aesthetics).

When to upgrade or install electrics

- Creating a new home office, gym, garage workspace, or studio
- Adding additional power outlets, lighting, or data points
- Updating outdated wiring that can't support modern equipment or devices
- Planning for future needs, including smart tech and high-demand appliances

Your perfect home office setup

Custom wiring for power and lighting, network and data point installation, circuit protection, energy-efficient lighting, and full testing for safety and compliance. We can also advise on layouts to reduce clutter and maximise usability in any renovation project.

Why choose us

- NICEIC-approved electricians
- Safe, neat, and compliant installations
- Tailored solutions for your specific renovation or workspace needs
- Friendly, local service with clear guidance

EV charging installations

Charge your electric vehicle safely and efficiently at home

Installing a home EV charger adds convenience and prepares your property for the future, but it requires careful electrical planning. From ensuring your system can handle the load to choosing the right location and charger type, a specialist electrician makes sure your EV charging is safe, compliant, and ready for daily use.

Our EV charging services

- Full installation of home EV charging points
- Assessment and upgrades to your existing electrical system if needed
- Advice on the best charger type and location for your needs
- Fully certified and compliant with UK electrical regulations

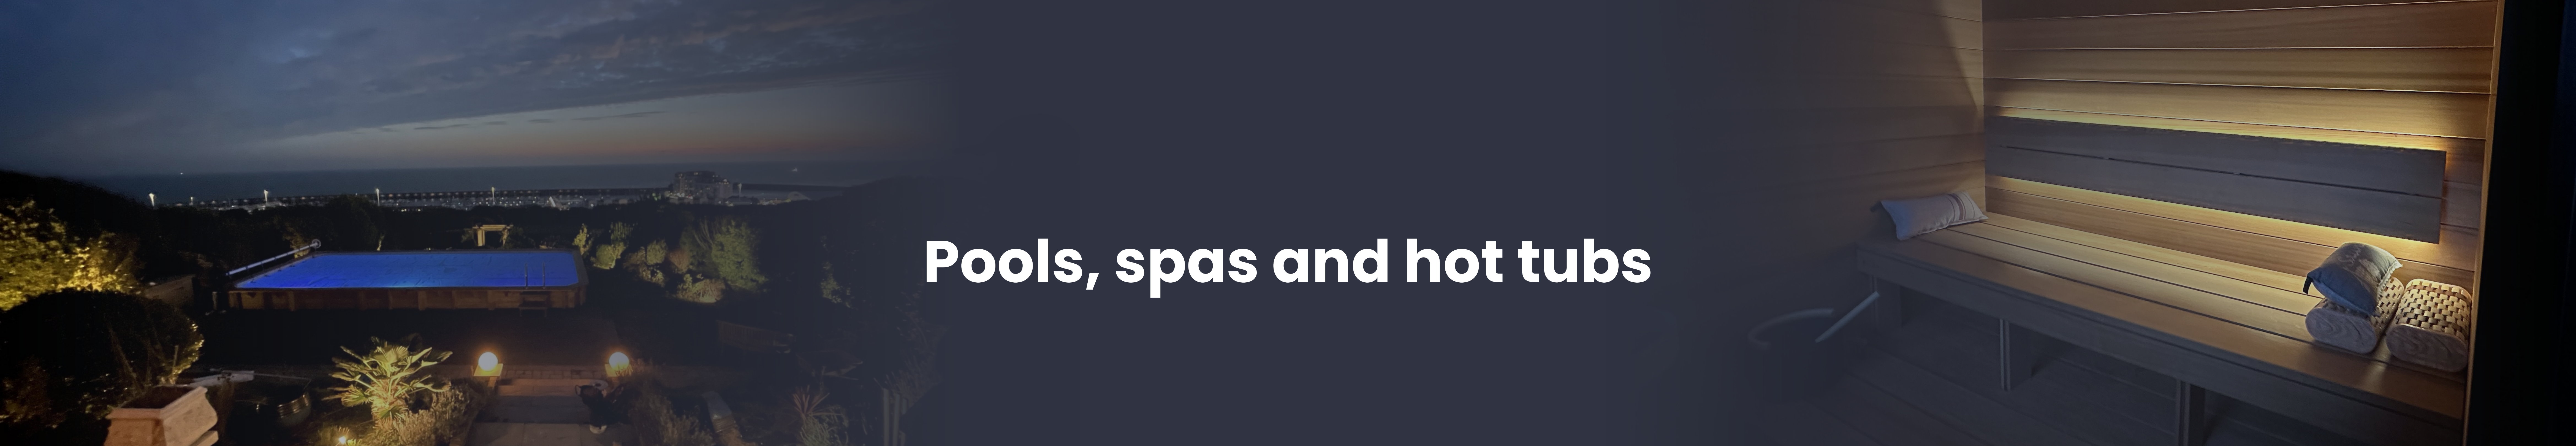

Why working with a specialist electrician matters

- EV chargers require dedicated circuits and correct load management
- Incorrect installation can be unsafe and damage your home's electrics
- Compliance with building regulations and safety standards is mandatory

Why choose us for EV charging

- Experienced, NICEIC-qualified electricians
- Safe, compliant, and future-ready installations
- Minimal disruption and expert advice on usage and placement

Make charging your EV at home simple and worry-free.

Pools, spas and hot tubs

Safe, reliable electrics for your water spaces

Installing a new hot tub, pool, or sauna? Electrical systems near water need specialist care. We make sure your installation is fully safe, compliant, and ready for year-round use.

When to call us

- Installing a new pool, spa, or sauna
- Upgrading or repairing pumps, heaters, or lighting
- Adding new outdoor electrical features
- Ensuring compliance with safety regulations

Our pool services

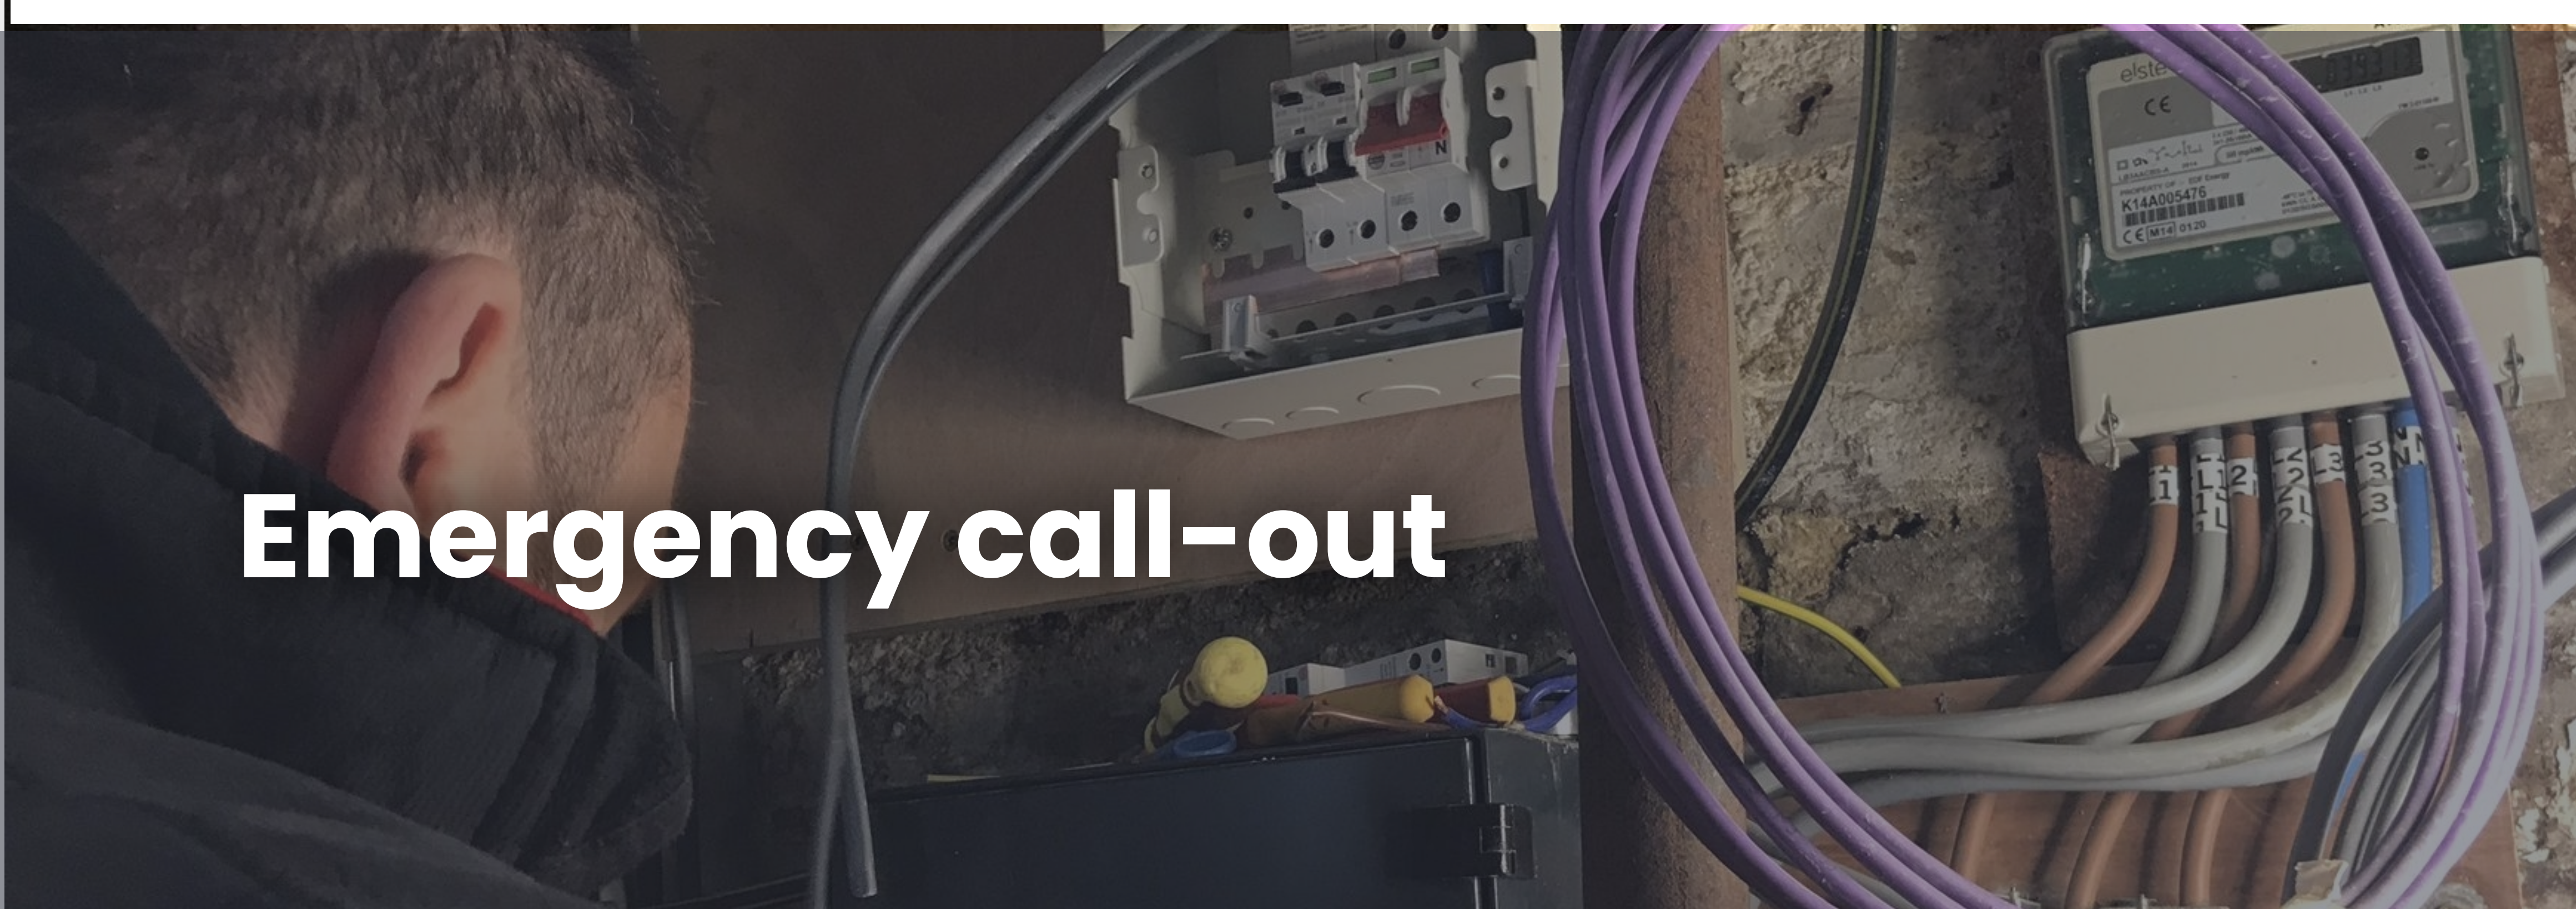

Wiring and installation for pumps, motors, heaters, lighting, and control panels. Inspection of wet-area electrics, verification of safety devices, and testing to ensure compliance and energy efficiency.

Why choose us for pool services

- NICEIC-approved electricians with wet-area expertise
- Safe, fully compliant installations
- Energy-efficient solutions
- Local, friendly service with clear advice

Our Other *Services*

As well as all the services listed, we also offer essential electrical support to keep your home safe and running smoothly. From certified electrical health checks and fault finding to emergency call outs, our qualified electricians provide fast, reliable, and fully compliant solutions for any situation.

A close-up photograph of an electrician working on a complex array of electrical wires. The wires are bundled and color-coded, with some purple and others grey. The electrician's head and shoulder are visible on the left side of the frame, looking down at the work.

Emergency call-out

Electrical issues happen, and when they do, you need a fast, reliable response.

Our team is on hand to quickly diagnose and resolve urgent problems, from power outages and faulty wiring to sparking sockets or tripped circuits. With certified electricians, clear advice, and safe, lasting solutions, we get your home's electrics back to full working order when unexpected issues arise.

A photograph showing a person's hand holding a yellow and black electrical testing device, likely a voltage tester or a small multimeter, against a background of dense electrical wiring and components.

Electrical Condition Reports (EICR) & Testing

Keep your home safe, compliant, and fully insured with our certified electrical health checks.

Faulty wiring, corrosion, rodent damage, or overloaded circuits can appear without warning, even in recently checked systems. Our EICRs identify hidden hazards, verify safety devices, and assess high-risk areas like pools, saunas, and outdoor electrics, giving you peace of mind and clear recommendations. Ideal for homeowners, landlords, and property buyers.

A close-up photograph of a person's hands holding a broken electrical plug. The plug is severely damaged, with the outer plastic casing cracked and charred, and the internal metal prongs exposed and melted.

Fault Finding

Tripped circuits, flickering lights, or buzzing switches can signal hidden electrical hazards.

Our expert team systematically inspects wiring, sockets, circuits, and safety devices to pinpoint the cause and get your home running safely again. With fast, reliable service and clear advice, we identify faults like overloads, damaged cables, or defective components and provide lasting solutions.
